## Connectria Adds AIX Cloud on IBM Power Systems

Posted @ 5/3/2012 11:52 PM By Chris Maxcer

Posted in [\[Hot News\]](#) | [0 Comments](#)

[Connectria Hosting](#) is now offering IBM AIX Cloud services alongside its recently delivered IBM i Cloud offering. Connectria's IBM AIX Cloud Hosting runs on IBM Power Systems. An IBM AIX Cloud with Managed Services starts as low as \$1,245 per month, and it can scale upward from 1/10 core with a 3 GHz processor.

With Connectria's IBM AIX Cloud, customers will be able to purchase the IBM AIX capacity and support they need, when they need it, for as long as they need it -- backed by Connectria's 24/7 IBM AIX administration and support.

"IBM's Power Systems line and AIX continue to capture market share, and we believe Connectria's IBM AIX Cloud will be an excellent alternative to purchasing an IBM AIX Server and running it yourself," notes Rich Waidmann, Connectria's president and CEO.

"We realize that cloud computing is not limited to Windows and Linux alone. Connectria's commitment to provide reliable cloud hosting solutions for a wide range of customers and environments, including IBM i, IBM AIX, and Oracle/Sun Solaris sets us apart from the crowd."

For more detail, check out [Connectria's IBM AIX Cloud Hosting](#).
