

Microsoft Azure

CASE STUDY

MICROSOFT AZURE PARTNER:
Connectria

WEB SITE: www.connectria.com

LOCATION: St. Louis, MO, USA

ORG SIZE: 150 employees

MICROSOFT AZURE PARTNER PROFILE:

Connectria provides cloud computing and custom managed hosting solutions. As a leader in complex multi-vendor solutions, Connectria supports a broad range of technologies, managed services, and security. A longstanding Microsoft partner and cloud service provider, Connectria also provides 24/7 managed services and support on the Microsoft Azure platform, including HIPAA and PCI compliance.

HIPAA-Compliant Services on Microsoft Azure Boost Patients' Perioperative Care Coordination

"We felt the combination of Azure's strengths along with Connectria's extensive knowledge of managing and supporting Azure in a HIPAA-compliant environment aligned very well with ePreop's long-term business direction." – Joe Lesters, EVP, Technology, ePreop

- **SITUATION**

ePreop is a software company whose Software-as-a-Service (SaaS) platform assists in care coordination of surgical patients while saving time and money. As a Connectria customer since 2009, ePreop enjoyed Connectria's expert HIPAA-compliant managed services and support. When ePreop wanted to move its platform to Microsoft Azure, Connectria was there to provide the best solution.

- **SOLUTION**

ePreop's software platform was designed and built for the cloud. The software includes SurgicalValet, which simplifies patient boarding, and AnesthesiaValet, an access point to SurgicalValet for a full perioperative surgical home suite. ePreop decided to stay with Connectria but move its solution from Connectria's data centers to Microsoft Azure so it could scale across Microsoft's global data center footprints as it expanded to regions outside North America.

- **BENEFITS**

ePreop now enjoys a robust, scalable SaaS solution on Microsoft Azure that can support its growth around the globe.

Connectria's expert 24/7 HIPAA managed services ensure ePreop maintains compliance so it can focus on developing and marketing software.

SurgicalValet™

SurgicalValet™ lets surgeons focus on surgery

AnesthesiaValet™
