

VIRTUALIZE YOUR APPLICATION OR DELIVER A VIRTUAL DESKTOP WITH CONNECTRIA CITRIX HOSTING

Connectria, making any device, anytime, anywhere a reality.

Let Connectria's expert Citrix engineers help achieve your goals. Whether you're looking to SaaS enable your applications or a planning to virtualize the Desktop, Connectria has a hosted Citrix solution that's right for you. We even make it easy for companies to stand up their Citrix environment with minimal cost and risk through Connectria's QuickStart program. [Learn More.](#)

Citrix XenApp for Applications (SaaS)

Pros: Most cost-effective way to stream applications, users can keep local desktop, reduces software licensing costs, no local software installs!

Cons: Not compatible with custom or some legacy applications, shared resources may impact performance

Ideal for: Sales reps, on-the-go employees, accountants, developers building software in a SaaS model

Citrix XenApp can stream one or multiple applications in the cloud and can deliver them to an end user on any device. All a user has to do is click on the Citrix Receiver icon and all available applications will be presented in one window. This is a common solution that is effective for most environments, with a few exceptions.

Limitations: Will not work with applications that cannot recognize different users from the same server (usually custom applications, or older applications), application settings are not saved between sessions

Citrix XenApp for a Shared Desktop (DaaS)

Pros: Users get a standardized desktop at a cost-effective price

Cons: Desktop customization is limited, shared resources may impact performance

Ideal for: App developers, Customer service agents, general office workers

Similar to streaming applications, XenApp can also be used to deliver a desktop by streaming the same server desktop to multiple users. Application access can still vary from user to user, desktop wallpapers can be customized and application settings can be saved in-between sessions. This setup helps minimize security concerns as desktops are locked down and users can only do pre-defined tasks. XenApp desktops can be launched within minutes with a set configuration. We typically estimate 50-75 users per server with most common applications.

The concept is similar to having a home computer with individual login for each family member. Multiple application instances can be open across different user desktops (if compatible).

Limitations: Will not work with applications that cannot recognize different users from the same server (usually custom applications, or older applications)

Citrix XenDesktop for Hosted Virtual Desktop (VDI & DaaS): Pooled or Dedicated

Pros: Fully customizable, fully dedicated resources, centrally managed, secure

Cons: Complex, more costly, resource intensive

Ideal for: C-level employees, game-developers, video editors, IT admins

Citrix XenDesktop is much more flexible than XenApp. It provides a fully dedicated desktop operating system running across individual VMs. Users have the ability to fully customize their desktop, access all their applications and not have to share computing resources with other users. The IT team is able to create an initial OS image with the standard applications and users can in turn customize it to their needs. If there are ever any issues with the user's desktop, a new one can be spun up by the IT team in no time.

Limitations: May be cost prohibitive

Why Choose Connectria?

At Connectria we have been running Citrix environments for over 10 years and have dedicated engineering staff for support. While many customers come to us asking for a VDI solution, we have found that more times than not we can set up a Citrix XenApp solution that works just as well, but is more cost effective. Additional qualifications include:

- We can design a custom solution for the customer's exact needs.
- We offer a low risk, low cost proof of concept program (QuickStart).
- We can provide a private, customized VDI. No resource contention across multiple organizations.
- Enterprise-grade hardware.
- SSAE-16 certified data centers.
- HIPAA/PCI Compliant hosting.
- Industry's widest range of supported technologies (Windows, Linux, IBM i, AIX and others).

Connectria's Citrix QuickStart Program – Citrix Made Easy: Ready for a Citrix solution?

With Connectria's Citrix QuickStart Program, customers can quickly implement a production-ready, scalable Citrix environment either for testing purposes, or to begin running a Citrix environment. This can be used for both Software as a Service (SaaS) implementations such as hosted Windows applications, as well as to run hosted Windows desktop environments using XenApp.

You can purchase our Citrix QuickStart Program on a month-to-month basis for up to 90 Days, and scale it up or down as needed. Several components of the QuickStart Program are provided **FREE** of charge during the 90 day program, including a firewall, a Citrix NetScaler VPX Express appliance, (5) Citrix XenApp users, and (1) instant SSL certificate.

Most components can continue to be purchased on a month-to-month basis going forward, while others may require a longer term commitment, including the different Citrix NetScaler appliances, should your environment require a more robust architecture. Either way, your Connectria Sales Engineer will work with you to explain your options upfront, so that there are no surprises and you can make an informed decision.

Whether you choose the Citrix QuickStart Program or not, Connectria will ensure we provide a solution that best meets your dedicated or cloud hosting needs at an affordable price. Please **contact us** to talk with a Connectria Sales Engineer if you would like to receive a quote.

Citrix QuickStart Program Up to 5 Citrix Users

Shared Firewall With Public Cloud Servers

\$599.00 Setup & \$490.00 / Month
