

SOLUTION BRIEF

MANAGED SERVICES

Connectria provides a wide variety of secure managed hosting services to companies of all sizes and industries. We specialize in popular and legacy technologies such as Windows, Linux, Citrix, IBM i, and Oracle. We offer dedicated, cloud, or hybrid (mixed) environments all backed by an extensive list of features and 24x7 support that is only a phone call away.

Accomplish More and Worry Less

According to the 2017 IDC Application Services Survey, 30% of executives are outsourcing management of their organization's infrastructure and application portfolio. This percentage is expected to rise to 41% over the next five years. Working with Connectria to handle day-to-day administrative tasks or those for which you don't have the necessary in-house skills can help you reach your key objectives.

Focus on strategic initiatives – Whether it's Big Data, AI, the IoT or something else that's got you thinking of all the exciting possibilities technology offers, offloading administrative tasks to Connectria can free up your IT resources to focus on initiatives that drive your business forward.

Ensure compliance & security – The threat landscape is always changing. Our team of experts can help you mitigate your risks and keep up with today's rapidly evolving security threats and the constant flow of regulatory changes.

Improve resource utilization – Outsourcing to Connectria lets your people do what they do best. You can have your most seasoned staff working on the most challenging tasks while ensuring you haven't tossed your rookies into the deep end too quickly. We'll cover the rest.

Optimize costs – Top-notch IT talent can be expensive, and not every area requires a year-round FTE. A managed service provider can help ensure you always have the people you need without the hassle and high cost of recruiting and retaining employees.

Get the job done – In business, things move fast, and just because something is a priority, that doesn't necessarily mean it gets done. A managed service provider can ensure vital tasks get done and done right.

Your Go-To Partner

As a managed service provider, we're not looking to take control of your IT department. We'd rather be your go-to partner, offering the services you need for as long as you need them. We work with your team every step of the way, so you will be building your in-house knowledge and expertise at the same time.

“Connectria has exceeded our expectations. Their expert remote management has helped us streamline and automate our processes, delivering tangible savings.”

Eric Hanson
Director of IT Services,
Milwaukee Electric Tool

Choose the Services You Need

We offer several core services designed to meet a wide variety of needs. Beneath each of these major categories are options that give us the flexibility to tailor a solution designed just for you. You pay for what you need and aren't forced to sign on for what you don't. As your needs change, we'll change with you, adapting our service offerings to your situation.

Managed Clouds

Out of sight does not mean out of mind. When you move workloads to an offsite cloud, whether that's a public cloud, like AWS or Azure, or a hosted private cloud, you still own the responsibility for things like security and compliance. We offer managed cloud services for both private and public clouds, so you can confidently put your workloads on the cloud that works best.

Remote Monitoring and Administration

While many of our clients are looking to offload the burden of managing their own data centers, others are still more comfortable keeping their IT systems on-premises. For these businesses, we offer a wide array of remote monitoring and administration services, so they can keep their infrastructure right where they can see it, but not have to worry about tasks such as system updates and database administration.

TRiA Multi-Cloud Management Platform

All our managed cloud services come standard with the TRiA Multi-Cloud Management Platform, which gives you visibility into all your cloud environments. In fact, this is the same platform we use to help our clients monitor the security, performance, and resource utilization of their clouds. With TRiA, you see what we see.

Security & Compliance

We have experts in a wide range of the most common industry standards and regulations including HIPAA/HITECH, PCI-DSS, SOX, GDPR and 21 CFR Part 11. Our security experts are also laser-focused on the latest security threats including ransomware and DDoS as well as newly discovered network and systems vulnerabilities. We'll work with you to create a solution that mitigates your risks.

Disaster Recovery

Your business depends on your data and applications to be there when you need them. We can help you determine appropriate recovery objectives for each workload and create failover and recovery strategies that meet those objectives. Periodic reviews and testing give you the confidence you need.

The Connectria Advantage

At Connectria, we believe in the philosophy, "If something's worth doing, it's worth doing well." We're proud of our history of delivering only the very best, jerk-free services to our customers around the world.
