

SOLUTION BRIEF

TRiA™ CLOUD MANAGEMENT PLATFORM

The TRiA™ Cloud Management Platform is the only multi-cloud management tool that allows you to manage diverse clouds, including AWS, Azure, VMware, UNIX and IBM iSeries and other cloud environments, using a single dashboard.

Increase Visibility Into Your Multi-Cloud Environment

There are a lot of cloud options from which to choose, and the majority of businesses use different clouds for different workloads. The TRiA Cloud Management Platform provides a view into all of your cloud environments to maximize visibility and control.

Security & Compliance – Monitor your systems 24x7 with dashboards to track your compliance objectives and ensure real-time enforcement of policies. The TRiA Cloud Management Platform comes standard with compliance automation routines for many of the most common requirements, such as PCI DDS, HIPAA/HITECH, and GDPR. These routines can also be tailored to meet your business-or industry-specific requirements.

Operations & Performance – With increasingly dispersed IT assets and a mobile workforce, many companies find it difficult to manage resources across locations and clouds. The TRiA Cloud Management Platform lets you monitor and manage all of your resources, wherever they are located, so you can easily identify areas where performance is less than optimal.

Cost Insights – The TRiA Cloud Management Platform gives you a comprehensive view of resource utilization and regional spend. Our team of experts will even help manage your costs by monitoring usage and looking for unused, underutilized, or inappropriately used resources. We then provide reports and guidance on how best to optimize your spend, so you get the most for your investment.

“Connectria has exceeded our expectations. Their expert remote management has helped us streamline and automate our processes, delivering tangible savings. Since Connectria has partnered with us, our relevant admin costs are a third of what they were.”

Eric Hanson
Director of IT Services
Milwaukee Electric Tool

Create a Consistent Approach to Resource Management

A consistent approach is key to the success of any security, compliance, or resource management program. However, as your organization grows, it's easy for different sites and divisions to deviate from the corporate plan. This is especially true of organizations that grow through acquisition.

The TRiA Cloud Management Platform lets you set policies and procedures, apply them across clouds and regions, and then monitor adherence. You can also consolidate your support processes with direct access to Connectria's support systems to track support requests and resolutions and identify trends that require attention.

Get the Insights You Need to Reach Your Goals

You chose your cloud environments to help you achieve key objectives such as lowering costs, increasing performance, and increasing agility. But different types of clouds serve different purposes. The typical business spreads workloads across five or more clouds.

The TRiA Cloud Management Platform is the only multi-cloud management tool that allows you to manage diverse clouds, including AWS, Azure, VMware, UNIX and IBM iSeries and other cloud environments, using a single dashboard.

Plus, the TRiA Cloud Management Platform comes standard with our managed cloud services, so you also get additional support services for your cloud environments such as data backup and restore services, advanced intrusion protection, 24x7 security incident response, managed firewalls, multi-factor authentication, and advanced compliance assistance for HIPAA and PCI environments.

The Connectria Advantage

Take advantage of the unrivaled experience that comes from working with a pioneer in cloud computing.

- 1st to deliver Private Cloud Hosting in 2005
- 1st to deliver HIPAA Compliant Cloud Hosting in 2007
